DETAILED ACTION

Drawings

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-7, 10-12 and 17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Moriyama.

4. Moriyama discloses the invention as claimed where: the embodiment of FIG 1 is a "metrology frame"; **6** is a platform with a primary surface; **2** is a reference surface; **11**, **12**, **13** are a plurality of linear actuators which are controlled by controllers **19**, **20** and

22; 15 are flexure members between platform **6** and each actuator; the device of Moriyama uses a distance feedback system; the actuators may be operated individually or simultaneously; the feedback system inherently includes conditions that could force the two surfaces out of a preferred position, such as a change in shape of a piece of work; and **5** are a plurality of vertical elements.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 8, 9 and 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moriyama in view of Neff.

Moriyama discloses the invention substantially as claimed. However, Moriyama does not disclose that the distance moved by the linear actuators is measured by encoders. Neff discloses how encoders may be used for the purpose of measuring the distance a movable member travels (see col. 5, ll. 48-57). Therefore, it would have been obvious to use linear encoders as taught by Neff in combination with the device of Moriyama as an alternative means for measuring the displacement caused by the actuators of Moriyama.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
